

A Study of Fretboard Harmony

The UnCAGED System

Part 1

Triads

Preface

What is the UnCAGED System?

The UnCAGED System is a tongue-in-cheek title that seeks to poke fun at the manner in which the CAGED System presents itself as a revolutionary method of approaching harmony on the guitar.

What is the CAGED System? Even if you haven't heard of it, I would be surprised if you weren't at least somewhat familiar with the concepts behind it. The basic idea is that you can take the five open major chord shapes (C, A, G, E, and D) and turn them into movable barre chord shapes allowing you to play pretty much any major chord in a number of ways. From there, you can turn them into their minor counterparts, add sevenths, and so on.

This is all great, and I would be lying if I told you I don't use its principles to visualize chord voicings up and down the neck, at least to some degree. My only beef with it is that it's last year's model with a new sticker. The earliest mention of it in a publication was in a 1975 issue of Guitar Player Magazine based on the guitar instruction of Keith Allen of the Blue Bear School of Music. Since then, it has evolved into a “guitar hack” for people to make money off of.

But the thing is, the idea of movable barre chord shapes has been around literally as long as the six-string guitar has existed. We're talking since the early 1800s. Play any music from the likes of Fernando Sor, Mauro Giuliani, Matteo Carcassi, Ferdinando Carulli, et al, and you will see these ideas being employed in their music. Except they weren't calling it the CAGED System. They simply understood the lay of the guitar fingerboard, and they understood the musical styles and idioms of their time. And that raises the question...

Do we need a system at all?

The CAGED System is really an intermediary step between understanding theory and understanding the guitar. Is this really necessary? Do we need to have a sub-system to get us from understanding how a major chord is constructed in the general musical sense to playing major chords on the guitar? Is the CAGED System not just a middle man that removes some of the need to intimately understand the neck of the guitar?

I think it only becomes that way if you allow it to happen. I can't tell you how many guitarists I've interacted with who know the notes on the E and A strings very well, but couldn't tell you the notes on the other four strings without needing to think hard about it. The reason is because they're so used to finding the roots of their chords and plugging in CAGED shapes, or more specifically E and A shapes (they're not even using CAGED to its fullest!), and then not bothering to pay attention to the other notes in the chords. Quite ironic considering the CAGED System is often sold as a way to break out of boxes when all it does is create them.

If you let it. For many it becomes a shortcut. And what happens if you shortcut your learning? You find yourself with years of experience and tons of gaps in your knowledge. As a teacher, I see it all the time. All. The. Time.

But like I said before, I myself use the principles of the CAGED System in my playing. I'm not advocating against it. I'm merely suggesting that you don't skip the vital step of studying what it is you're actually playing when you plop down a chord shape. Whenever I go to play a chord, I can recall the shape of it on the neck before I play it, but I'm also aware of every note in the chord; what the notes themselves are, their degrees in the chord's structure (where's the root, where's the third, where's the fifth), and perhaps most importantly, how each sounds in the context of the overall harmony.

The Homework Assignment

When I was a sophomore in college, I had to take a class called Fretboard Harmony. One of the first homework assignments was to come up with as many ways as we could to play a C major chord and write them down. I came up with probably 25 different ways, and there's a lot more than that.

Whenever I start working with a new student and they express a desire to know the fretboard better, I always give them the same assignment. It opens doors to bigger conversations, but it also forces them to go hunting for notes all over the neck.

What's the criteria here? A C major chord contains the notes C, E, and G. All you need to do is find any which way you can grab all three of those notes. Doubling at the octave is allowed, but not required. Inversions are fair game. That's it. Go nuts.

By doing this, you'll certainly make discoveries.

This book is inspired by that assignment. It won't teach you every possible way to play every chord, but the exercises contained within aim to teach you deeply about harmonic structure using the fretboard as the backdrop. This is not the CAGED System. This is the UnCAGED System.

Again, joke title.

On organization and nomenclature

This book is the first of an as yet undetermined number of volumes of The UnCAGED System. It focuses entirely on triads – every one of them. There are only four possible types of triads: major, minor, diminished, and augmented. No, sus chords don't count.

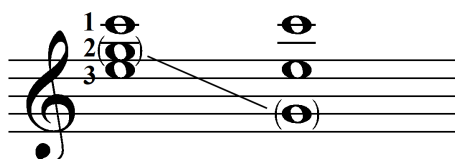

These four types of triads represent every possible combination of two intervals of a third stacked on top of each other. For example, with C as the root:

	C Major	C Minor	C Diminished	C Augmented
Fifth:	G	G	G^b	G[#]
	(minor third)	(major third)	(minor third)	(major third)
Third:	E	E^b	E^b	E
	(major third)	(minor third)	(minor third)	(major third)
Root:	C	C	C	C

When voicing a triad, doubling of notes at the octave is allowed. Doing so does not change the fact that it is a triad. In this book, octave doubling is not a focus, however. Triads may also be inverted so that the root is not the lowest sounding note. Again, this does not change the identity of the chord, but it does affect its functional implication in a real musical context.

The exercises in this book are broken into four parts: major, minor, diminished, and augmented. Within each, all triads are presented in clockwise circle of fifths order, except for the augmented triads, as augmented triads are symmetrical in that any of their three notes can be perceived as the root. In other words, they cannot be meaningfully inverted because no matter how you flip the notes around, they're always stacked major thirds.

Two types of voicings are presented for all triads: closed voicings and drop 2 voicings. Closed voicings simply place all notes of a chord as tightly together as they can be, similarly to how a piano might voice them. Drop 2 voicings are a little trickier to describe. If you take a closed voicing and number the notes 1, 2, 3 from highest in pitch to lowest in pitch, and then lower note 2 by an octave, you end up with a drop 2 voicing. These voicings have a more open, airy sound than closed voicings.

As you work through this book, make observations. Take note of which notes are the root, third, and fifth in every triad you play. Notice how they relate to each other voicing you play. Pay attention to how they fit within chord shapes that may already be familiar to you.

Being able to voice any chord in a variety of ways is an incredibly valuable musical skill. Having a broad harmonic vocabulary on your instrument gives you the tools to serve the music you're playing in more creative and interesting ways. I'm confident the work you do here will bring you new perspectives that will do wonders for your playing.

The image displays the musical notation and fretboard diagram for the song "The Sound of Silence" by Simon & Garfunkel. The notation is in 4/4 time, featuring a treble clef and a key signature of one flat (B-flat). The melody is written on a single staff, with the lyrics "The sound of silence" written below it. The fretboard diagram shows the first 12 frets of the guitar, with the strings labeled E, A, D, G, B, and E from top to bottom. The diagram includes fingerings (1-4) and fret numbers (1-12) for each note. The song is in the key of B-flat major, and the tempo is marked as "Moderato".

The image shows a musical score for guitar. The top staff is a treble clef staff with notes and fingerings. The bottom staff is a tablature staff with fret numbers. The music is in the key of D major (F# and C#) and 4/4 time. The score consists of 16 measures, divided into four groups of four measures each. The first group of four measures starts with a treble clef and a key signature of one sharp (F#). The second group of four measures starts with a key signature of two sharps (F# and C#). The third group of four measures starts with a key signature of one sharp (F#). The fourth group of four measures starts with a key signature of two sharps (F# and C#). The tablature staff shows fret numbers for each measure, with some measures having multiple fret numbers for different strings.

The image displays a musical score for guitar, featuring a standard notation staff and a corresponding TAB (Tuning Arpeggiated Bass) staff. The standard notation staff uses a treble clef and a key signature of one sharp (F#). The TAB staff is a six-line system with fret numbers (0-16) and bar lines. The music is divided into measures by vertical bar lines. The TAB staff includes a 'T' (Tuning) column on the left, followed by six columns of fret numbers for the strings. The fret numbers are: 16, 13, 14, 16, 11, 9, 12, 13, 9, 8, 6, 9, 6, 7, 4, 1, 1, 4, 1, 1, 2, 4.
